- Display of master record holder's link for subscribed electronic resources. (Towers)

A colleague is asking about the display in MOBIUS of the master record holder's link for subscribed electronic resources, the example being <http://tinyurl.com/6fwdq2y>. She got a reply from Jessica Hammond that it would be an option for MOBIUS to remove that box, and only show the links in the grid of holdings. I went over the basics that I remember through all my time with MCDAC, that if we removed the box, we wouldn't have the link that we would want for freely available resources. It occurs to me that, when this was discussed, when we opened a record we would need to follow a Display Holdings link before we saw the grid of holdings. Now that the grid shows when we open the record, would it be something for MCDAG to discuss to have the box at the top removed, and have the links, including for freely available resources, in the grid?

- Record sets and authority processing. (Towers)

There are authority problems in records in sets such as Films on Demand and Ebrary, and I understand that the number of records in these sets is putting a strain on MCO's budget for authority control. Since several clusters are sending the same groups of records from these sets, would it be within MCDAC's purview to find a way that these records could be sent once for everyone, and results could be shared? That would be if we can get around the problem of getting the authority records for new headings into the cluster catalogs; a heading might be new to one cluster but not another.

- Conflicting genre/form headings. (MERLIN)

1	=Suspense Films -- See <u>Thrillers (Motion pictures)</u> This heading is used as a genre/form heading for films that feature a build up of suspense, tension, uncertainty, menace, and anxiety as primary elements and in which the audience is kept on tenterhooks.	1
2	<input type="checkbox"/> <u>Suspense Films</u>	84

1	=Mystery Films -- See <u>Detective and mystery films</u>	1
2	<input type="checkbox"/> <u>Mystery Films</u>	26

At the last MQCC meeting, the following suggestions were made:

- Determine a priority hierarchy of thesauri and prefer the terms in that order. Modify bibliographic records to match. (consensus seems to be with choosing lcgft, although I imagine other libraries/clusters might prefer gsafd).
- Change 455 fields to 555 when the term matches a term in a different thesaurus.

Someone pointed out that there is a MCDAC standard not to delete fields that are correct and so we would like to get MCDAC's input. Is this something other libraries have encountered? Any ramifications for the proposals above (especially in terms of who the master record is)? As far as I can tell there aren't that many of these headings, so honestly I don't think it's worth spending a lot of committee time on this.

- Google API in MOBIUS. (MERLIN)

Example record: <http://laurel.lso.missouri.edu/record=b8272729~S1>
