

Arthur Coordinator Minutes, 7.23.01

1. ILL Module--Robin updated the group on the status of the ILL module and wanted to know if the Arthur group would be interested in testing it. Response was lukewarm at best, and the coordinators wish to table this until after the MilAcq and MilCat are up and running.
2. MilAcq—Implementation is scheduled for sometime during the week of July 29-August 3. Arthur staff persons are welcome to begin using it at any time. We can schedule training w/Mark if we feel it's necessary
3. MilCat—After R2001 is implemented, MilCat will be available.
4. 520 enrichment--The Arthur Cluster decided the following:
 1. Arthur will add ongoing 520 enrichment.
 2. The 520 index will be changed so that for all future records only the 520 blank will be keyword indexed.
 3. Webpac labels will be changed so that the 520's match the OCLC print constants for the indicator.
5. YTD circ stats—the group decided that everyone should do their own whenever they like.
6. Public note in webpac—Jim indicated that since there are so few item records with notes added to them, adding the public note to the webpac would display in an annoying manner. The group decided against it.
7. Advanced Keyword Searching—Will be installed on the Arthur machine in early August.
8. New chair—Joni was unsuccessful in off-loading the blue binder to the next er, victim. She will try again next time.
9. Next meetings on September 7th, November 2nd, and February 2nd.
