

MOBIUS Catalog Design Advisory Committee  
Agenda  
March 9, 2007

1. Approval of minutes from meeting on November 17
2. MOBIUS update
3. Uncontrolled subject headings (continued discussion from November)

*NOTE: Our choices are to suppress all 655s or none. On November 21 I sent a message to the list describing a PHP utility that would analyze frequency of uncontrolled thesauri. The utility is still online, if you'd like to run this analysis before the meeting this afternoon.*

4. Language limits in the catalog (continued discussion from November)

*NOTE: Jim sent an Excel file to the list on February 12 containing statistics for language codes in MOBIUS. In terms of frequency, Bulgarian ranked 44<sup>th</sup>. We should decide which languages we wish to add limits for.*

5. Change MOBIUS request drop-down box from cluster to institutional affiliation.

*NOTE: Currently when making a MOBIUS request, patrons are presented with a box that asks, "With which cluster are you affiliated?" The newly-installed agency software would let us change the question to, "With which institution are you affiliated?" and the drop-down options to individual libraries*

6. ENDnote settings

*NOTE: When a patron requests that a record in MOBIUS be exported in ENDnote format, limited information is exported. MERLIN, however, has settings that export more complete information. Should we change the settings in MOBIUS to match those in MERLIN?*

7. Webpac Pro on MOBIUS
8. MOSL Digital Archives
